

the print server includes a job observation module for monitoring and gathering the status of the plurality of printers connected to the print server, and sends the gathered status to the plurality of computers simultaneously; and each of the computers includes a status monitor for displaying the status.

11. (Thrice Amended) A method of controlling a print system, comprising the steps of:

gathering a status of a plurality of printers with a print server; and sending the gathered status of the plurality of printers simultaneously to a plurality of computers connected to the print server, the status being displayed at each of the plurality of computers.

22. (Twice Amended) A print server adapted to be connected to a plurality of printers and a plurality of computers, the print server comprising:

a job observation module for monitoring and gathering the status of the plurality of printers; and a device for simultaneously notifying each of the plurality of computers of the gathered status of the plurality of printers.

Please add the following new claims 36, 37, 38 and 39:

36. (New) The printer server of claim 27, wherein the sender sends the status to the plurality of computers simultaneously.

37. (New) The method of claim 29, wherein the status is sent to the plurality of computers simultaneously.

38. (New) The printer server of claim 31, wherein the sender sends the status to the plurality of computer simultaneously.

39. (New) The method of claim 33, wherein the status is sent to the plurality of computers simultaneously.
